                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 protein - protein search, using sw model
                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                             A_Geneseq_1101:*

```
The present sequence is a membrane transport protein,

MTRP-12 from Incyte clone 1733477 isolated from human BRSTTUTO8 cDNA

CC library. MTRP-12 shows homology to mouse transporter (GI 5359730)

CC and human transporter (GI 291964), and is expressed in nervous,

gastrointestinal and reproductive tissues.

CT the present sequence is useful in diagnosis, prevention and treatment

CC of disorders related with increased or decreased expression of MTRP

CC such as familial goitre, Menkes disease, diabetes, Parkinson's disease,

CC neurological disorders such as Alzheimer's disease, depression, epilepsy,

CC schizophrenia, immune/inflammatory disorders such as AlDS, Addison's

CC disease, allergies, atherosclerosis, Graves disease, gout, Hashimoto's

CC thyroiditis, viral, bacterial, fungal, parasitic, protozoal or

Fragments of MTRP polynucleotides are useful as targets in microarrays.

MTRP DNA is also useful for generating hybridisation probes useful in
                                                                                                                                                                                                                                                                                                                                                                04-NOV-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      604
```

transporter expression containing a DNA sequence encoding a mammalian sulfate transporter (expression product of the DTDST gene) and containing no DNA sequence of 5' translation region of the mammalian sulfate transporter gene. The invention also describes; (A) a method for screening a human bone/cartilage disease treating agent including the steps: (1) transforming an animal cell with the above vector, (2) culturing the animal cell in the presence of a sample and (3) detecting the increase in the sulfate ion intake to the cell; (B) a drug preparation for the treatment of human bone/cartilage disease containing

for

containing

This invention describes the construction of a novel vector for sulfate

DTDST; human. expression vector; bone disease; cartilage disease; drug preparation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the above vector as the active component. The sulfate transporter gene-containing vector is high in expression efficiency. This sequence represents the rat DTDST protein used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes the construction of a novel vector for sulfate transporter expression containing a DNA sequence encoding a mammalian sulfate transporter (expression product of the DTDST gene) and containing no DNA sequence of 5' translation region of the mammalian sulfate transporter gene. The invention also describes; (A) a method for screening a human bone/cartilage disease treating agent including the steps: (1) transforming an animal cell with the above vector, (2) culturing the animal cell in the presence of a sample and (3) detecting the increase in the sulfate ion intake to the cell; (B) a drug preparation for the treatment of human bone/cartilage disease containing the above vector as the active component. The sulfate transporter gene-containing vector is high in expression efficiency. This sequence represents the human DTDST protein used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim

                                                                    The present invention relates to human single exon nucleic acid probes (SEMP: see AAI10068-AAI28459). The present sequence is a peptide encode by one such probe. The SEMPs are derived from human HeLa cells. The SEM can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefor useful in grading and/or staging of diseases of the cervix, notably

                           Peptide #1699 encoded by probe for measuring breast gene expression
                                                   09-OCT-2001
                                                                       AAM03017;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast cancer, disorders prodifferative breast disease and non-carcinoma tumours.
                                                                                                                                                                                                         Note: The sequence data for this patent did not form specification, but was obtained in electronic format

This sequence is obtained from wlm4 library, clone wlm4.pk0016.all, derived from wheat seedlings, 4 hours after inoculation with E. graminis. It has 73% sequence identity to Arabidopsis thaliana sulphate permease (gi 2626753). This sequence is used as a probe to isolate other plant sulphate assimilation proteins, for genetic and physical mapping of related genes and as markers of traits linked to the gene. This is useful for plant breeding and to construct chimeric genes, used to create transgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid fragments encoding sulfate assimilation proteins in plants and seeds useful as probes for isolating cDNAs and genes encoding homologous proteins, in producing transgenic plants -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             plants with altered levels of sulphate permease. The sulphate permease peptides are useful for producing antibodies, that are used to screen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 6;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Allen
                                                               454

This sequence is obtained from sfl1 library, clone sfl1.pk0043.910, derived from soybean immature flower. It has 75% sequence identity to Arabidopsis thaliana sulphate permease (g1 2285885). This sequence is used as a probe to isolate other plant sulphate assimilation proteins, for genetic and physical mapping of related genes and as markers of traits linked to the gene. This is
                                                                                                                                                                                                                                                          useful for plant breeding and to construct chimeric genes, used to create transgenic plants with altered levels of sulphate permease. The sulphate permease peptides are useful for producing antibodies, that are used to screen and isolate cDNA clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid fragments encoding sulfate assimilation proteins in plants and seeds useful as probes for isolating cDNAs and genes encoding homologous proteins, in producing transgenic plants -  \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2}
